Bright Path Coaching

Workshop Registration & Attendance Automation

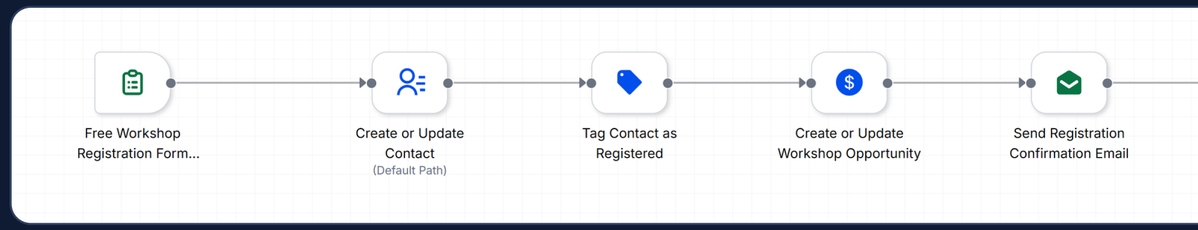

GoHighLevel CRM, Workflow Automation, and Make.com Integration

SAMPLE PROJECT

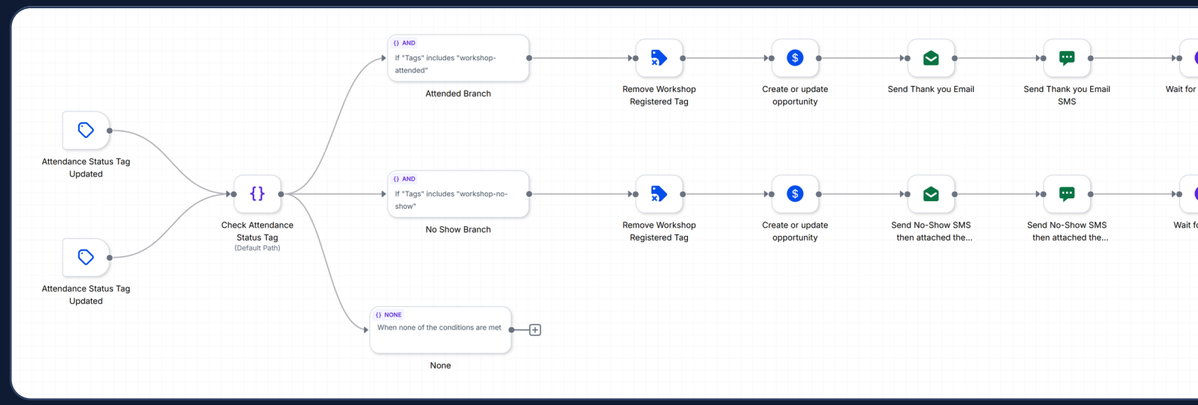

ROLE

GoHighLevel CRM & Automation Specialist

REGISTRATION WORKFLOW

ATTENDANCE STATUS WORKFLOW

01 · THE PROJECT

Project Overview

Bright Path Coaching is a sample workshop business that I set up to show how I organize a workshop process in GoHighLevel and track attendance with Make.com and Google Sheets.

The goal was to organize the process from registration and reminders to attendance tracking and follow-up.

SAMPLE IMPLEMENTATION

This is a project I built to demonstrate my work. It is not a client engagement, and it does not include client results.

THE WORKSHOP PROCESS

01 **Registration**
Free workshop form, contact, tag, opportunity and confirmation

02 **Reminders**
Email and SMS before the workshop

03 **Attendance**
Make.com scenario that reads and updates Google Sheets

04 **Attended / No-show**
Tag-based branches in GoHighLevel

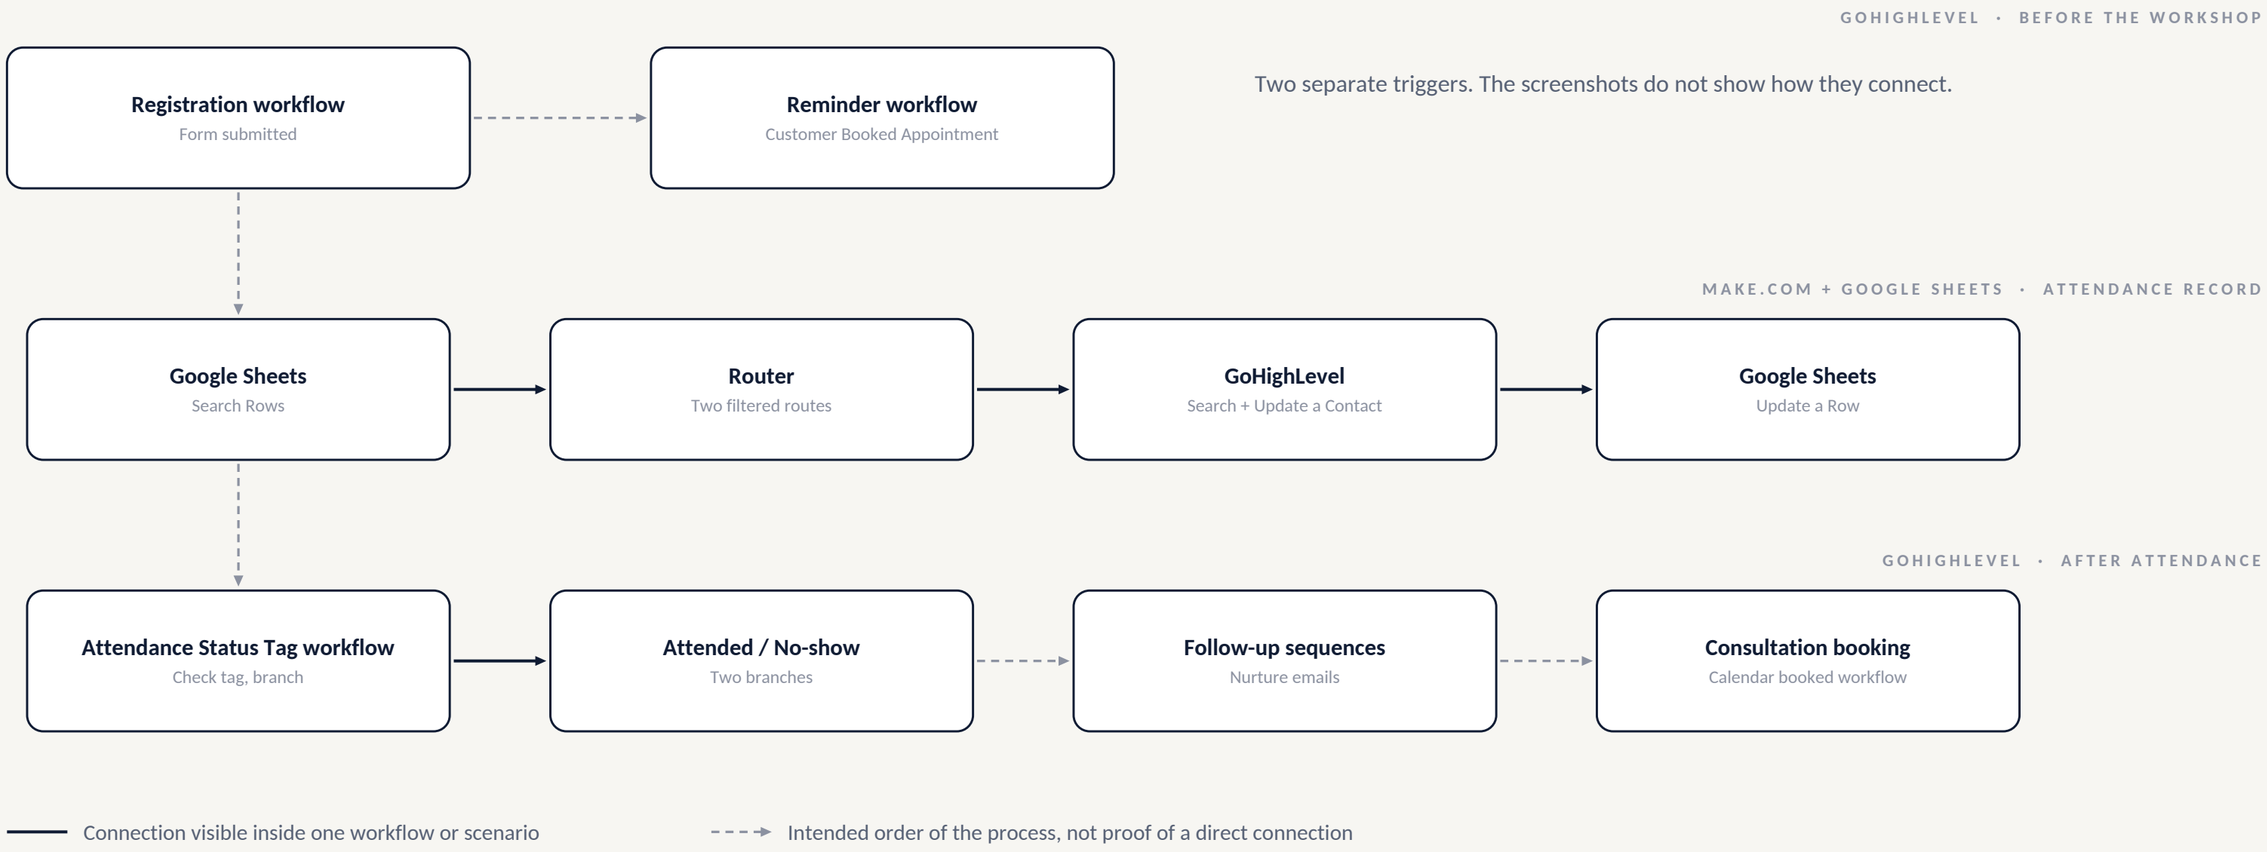

05 **Follow-up**
Nurture emails and a consultation invitation

TOOLS

GoHighLevel | Make.com | Google Sheets

02 · SYSTEM OVERVIEW

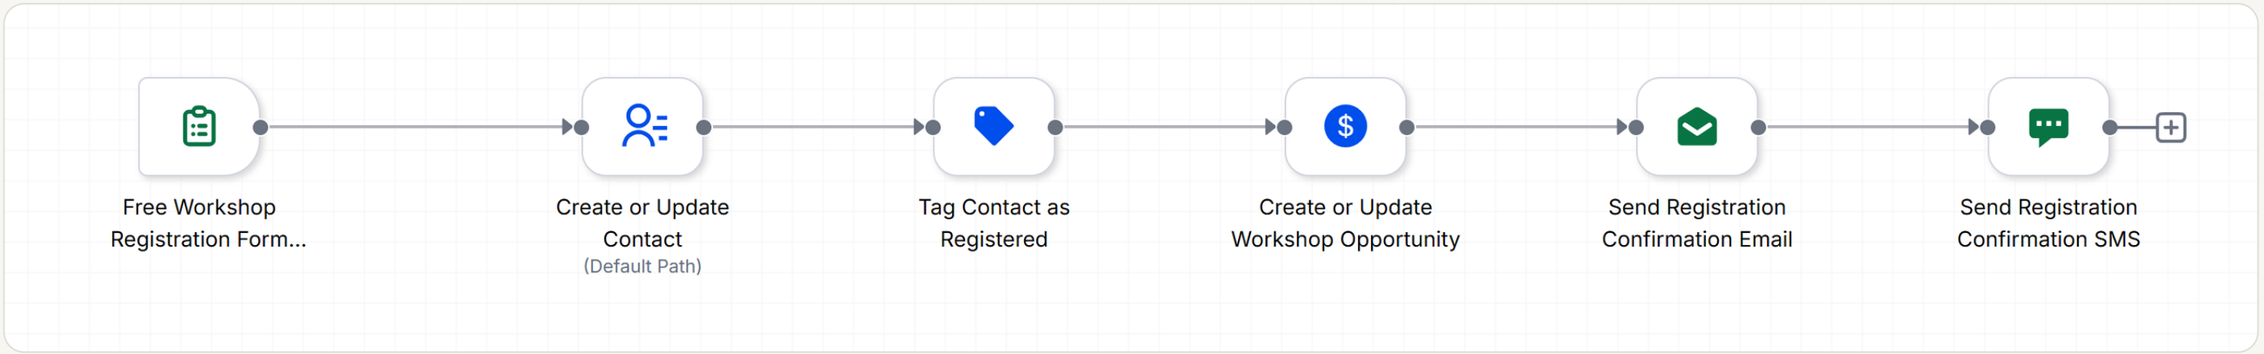

How the Pieces Fit

03 · GOHIGHLEVEL

Registration Workflow

FREE WORKSHOP REGISTRATION

01

Free Workshop Registration Form

Starts the workflow when the form is submitted.

02

Create or Update Contact

Adds the lead as a contact, or updates an existing one.

03

Tag Contact as Registered

Marks the contact as a workshop registrant.

04

Create or Update Workshop Opportunity

Puts the registration into the pipeline.

05

Send Registration Confirmation Email

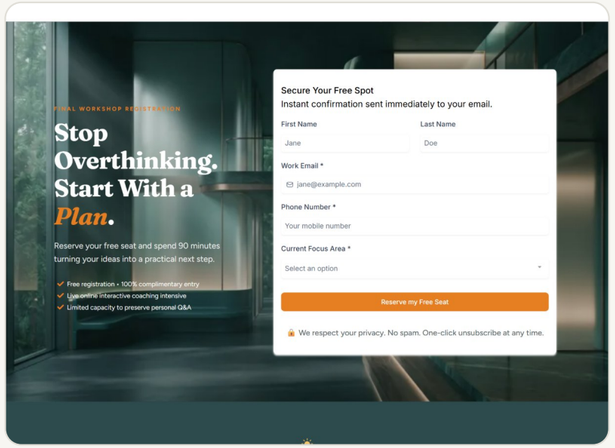

Confirms the registration by email.

06

Send Registration Confirmation SMS

Confirms the registration by SMS.

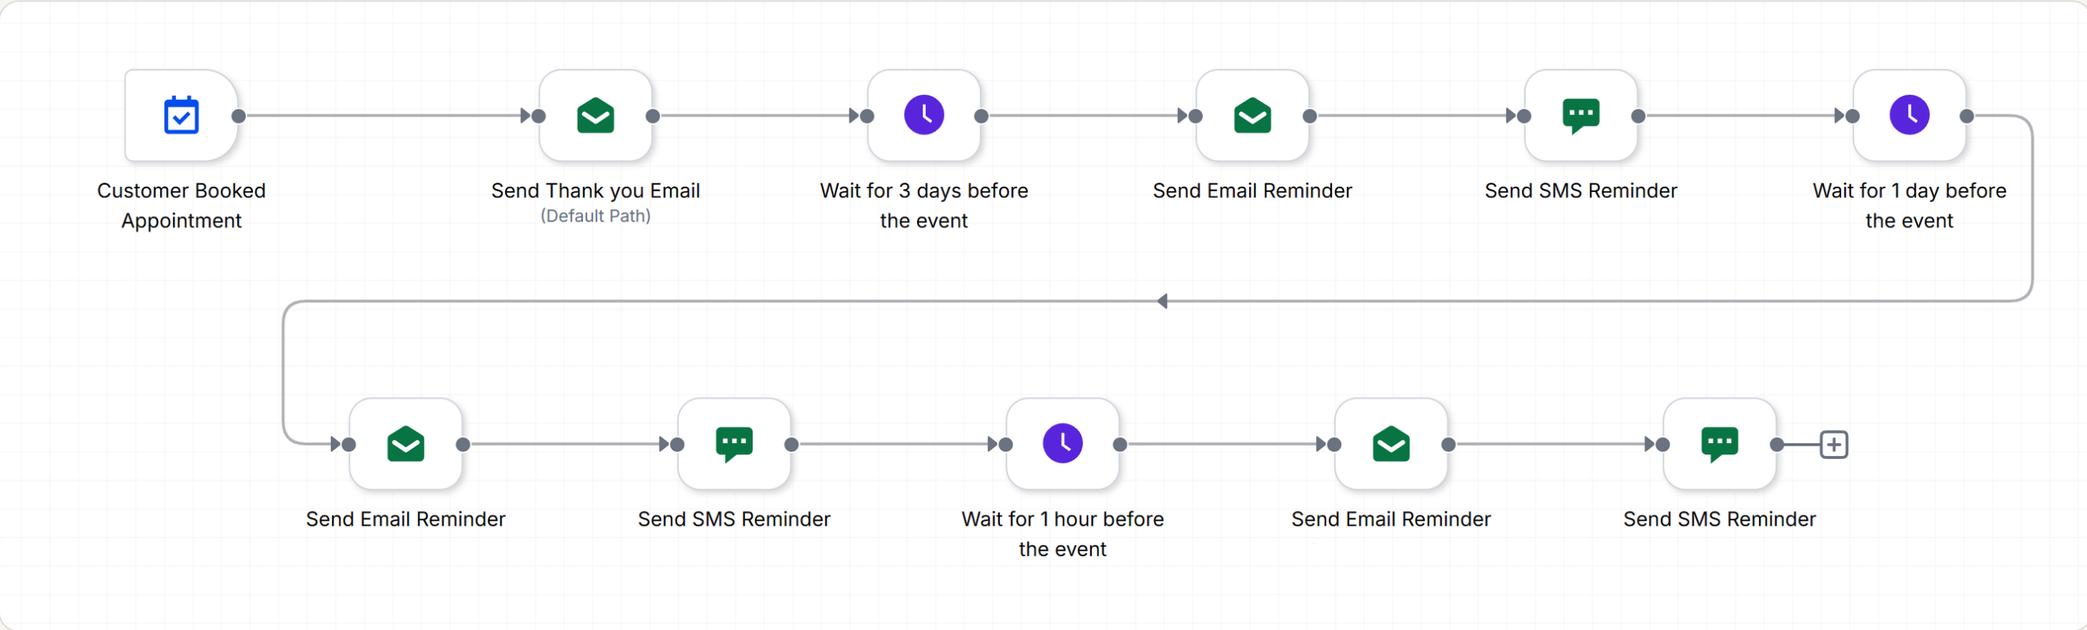

REGISTRATION FORM ON THE LANDING PAGE

The workflow ends after the SMS. Reminders run from a separate workflow, shown on the next page.

04 · GOHIGHLEVEL

Workshop Reminder Workflow

3 days before: email + SMS

1 day before: email + SMS

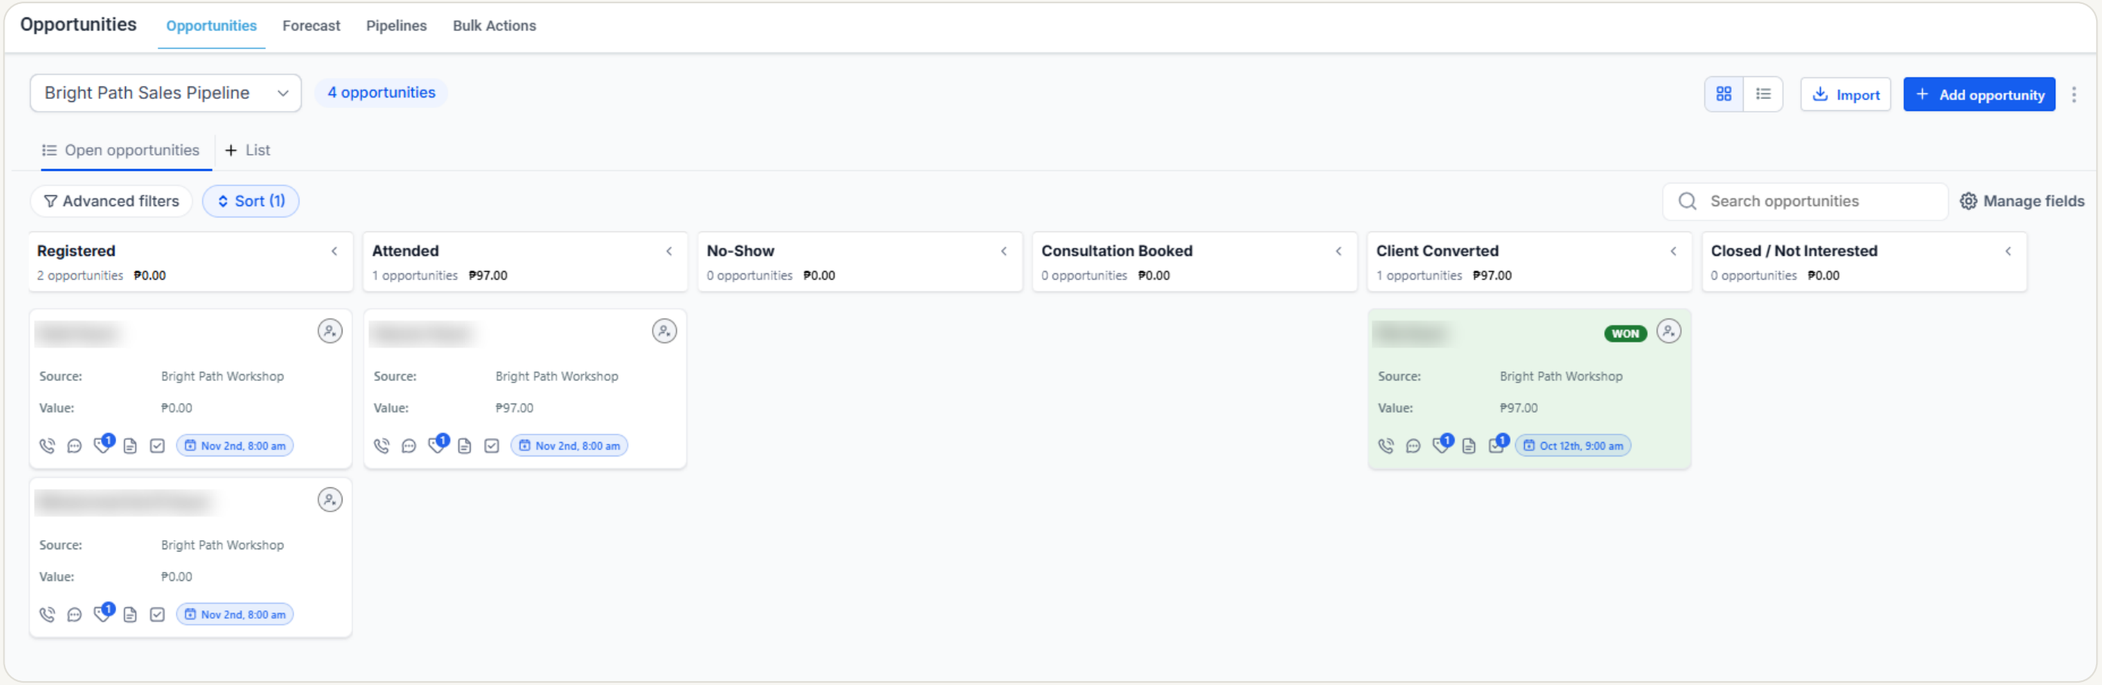

1 hour before: email + SMS

The workflow starts from Customer Booked Appointment and sends a thank-you email first. Each reminder point is a wait step followed by an email and an SMS. I can’t see any stop conditions in this workflow, so I am not claiming that reminders stop for attended, no-show or booked contacts.

05 · GOHIGHLEVEL CRM

CRM Pipeline

BRIGHT PATH SALES PIPELINE

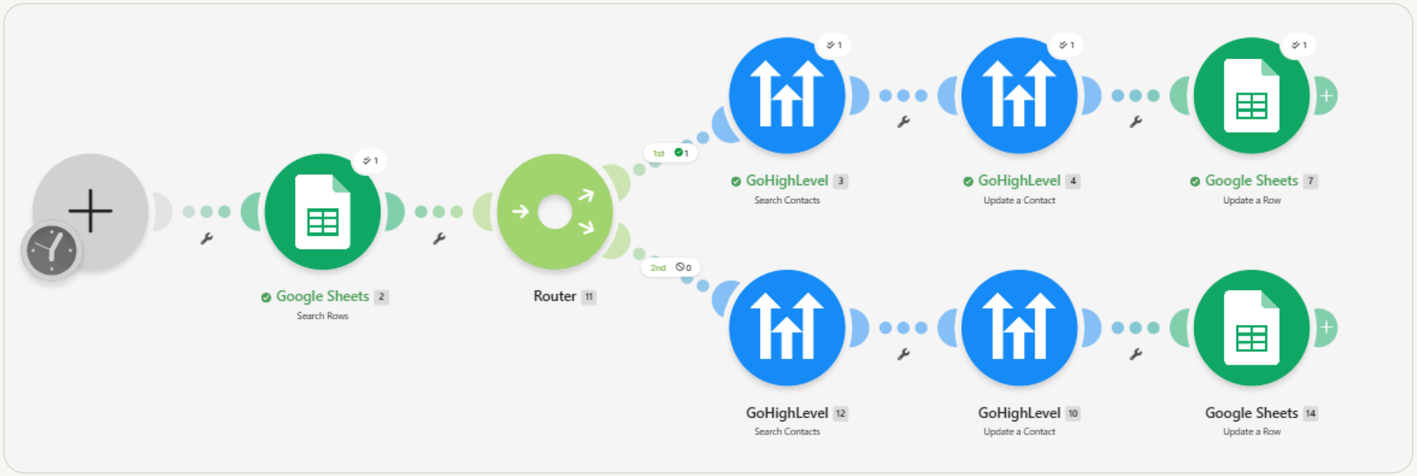

I organized the workshop opportunities into six stages: Registered, Attended, No-Show, Consultation Booked, Client Converted and Closed / Not Interested. The sample opportunities sit in Registered, Attended and Client Converted, and each one uses Bright Path Workshop as its source.

Some workflows include Create or update opportunity and Move Opportunity steps, but the stage each step uses is not visible in the screenshots. Contact names in this screenshot are blurred.

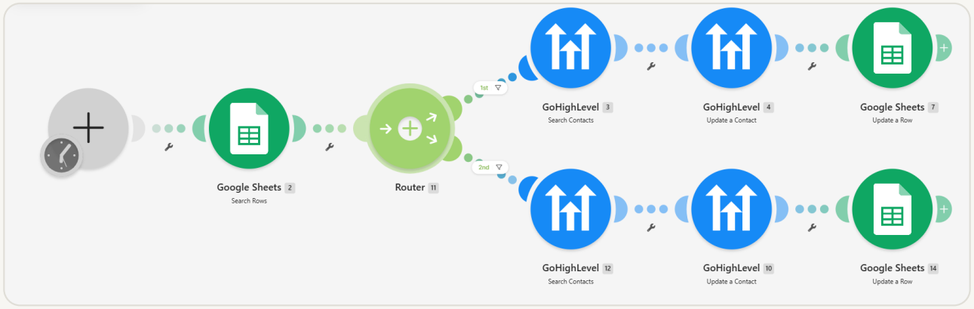

06 · MAKE.COM

Attendance Automation

BRIGHT PATH - WORKSHOP ATTENDANCE SYNC

BRIGHT PATH - 1 ON 1 COACHING

A second scenario uses the same module layout.

MODULE ORDER

1. **Schedule**
   Runs every 15 minutes; shown inactive in the editor
2. **Google Sheets 2: Search Rows**
   Finds the attendance row
3. **Router 11**
   Splits into two filtered routes
4. **GoHighLevel 3 / 12: Search Contacts**
   Looks up the contact
5. **GoHighLevel 4 / 10: Update a Contact**
   Updates the contact record
6. **Google Sheets 7 / 14: Update a Row**
   Writes back to the sheet

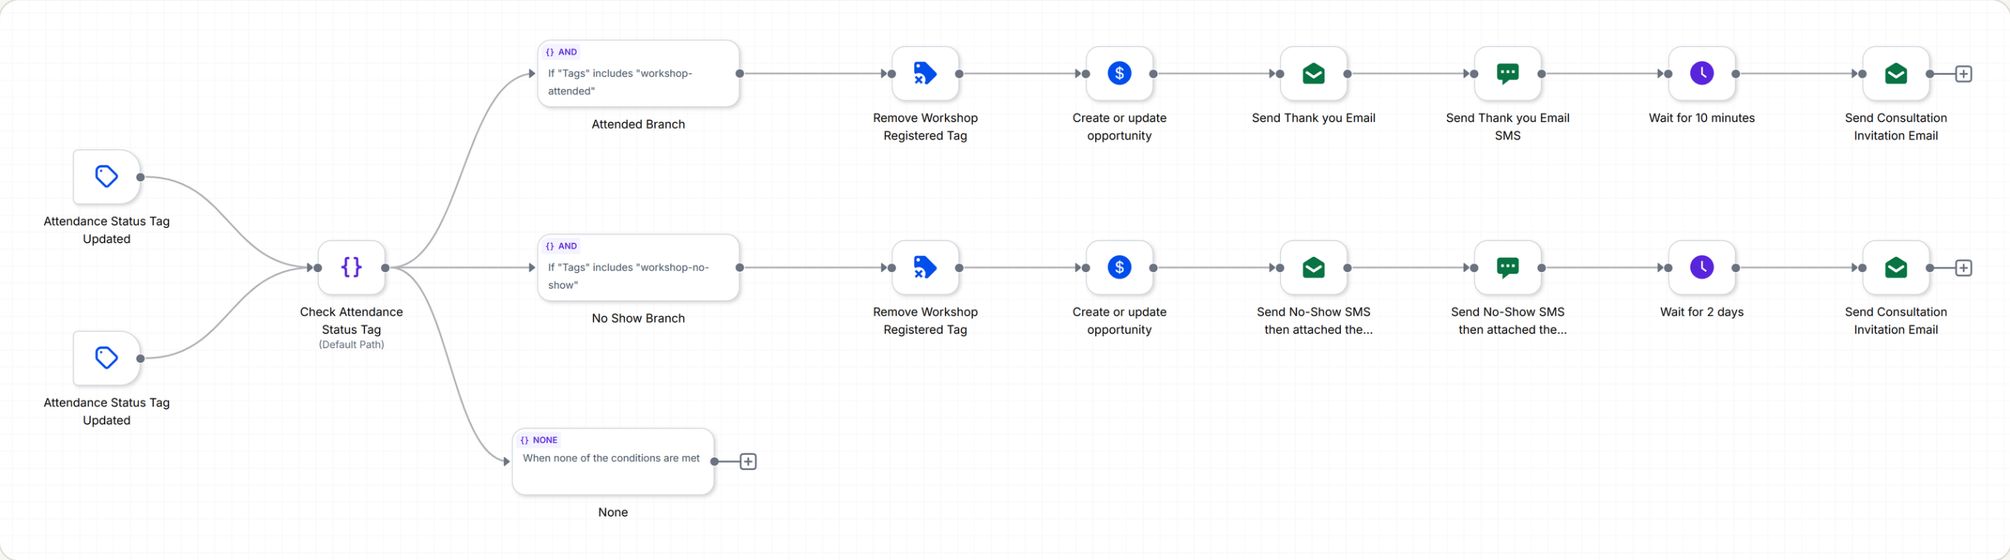

The run view shows green checks on the first route and no bundles on the second. The router filter conditions and the fields set in Update a Contact are not readable, so I am not describing them.

WHY THE ROW NUMBER MATTERS

Update a Row has to know which spreadsheet row to change. The row number returned by Search Rows is what gets mapped into it.

07 · GOHIGHLEVEL

Attendance & No-Show Handling

TRIGGERS AND CHECK

Two Attendance Status Tag Updated triggers feed a Check Attendance Status Tag condition. It routes by tag: workshop-attended, workshop-no-show, or none. The screenshot does not show what applies the tags.

ATTENDED BRANCH

Remove Workshop Registered Tag, create or update the opportunity, send a thank-you email and SMS, wait 10 minutes, then send a consultation invitation email.

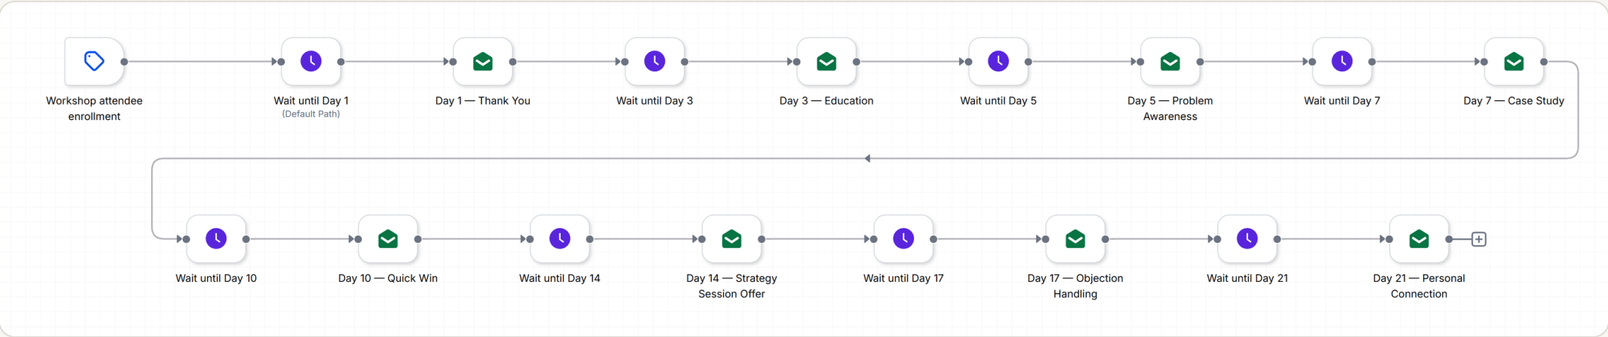

NO-SHOW BRANCH

Remove Workshop Registered Tag, create or update the opportunity, send two no-show messages (email and SMS), wait 2 days, then send a consultation invitation email.

08 · GOHIGHLEVEL

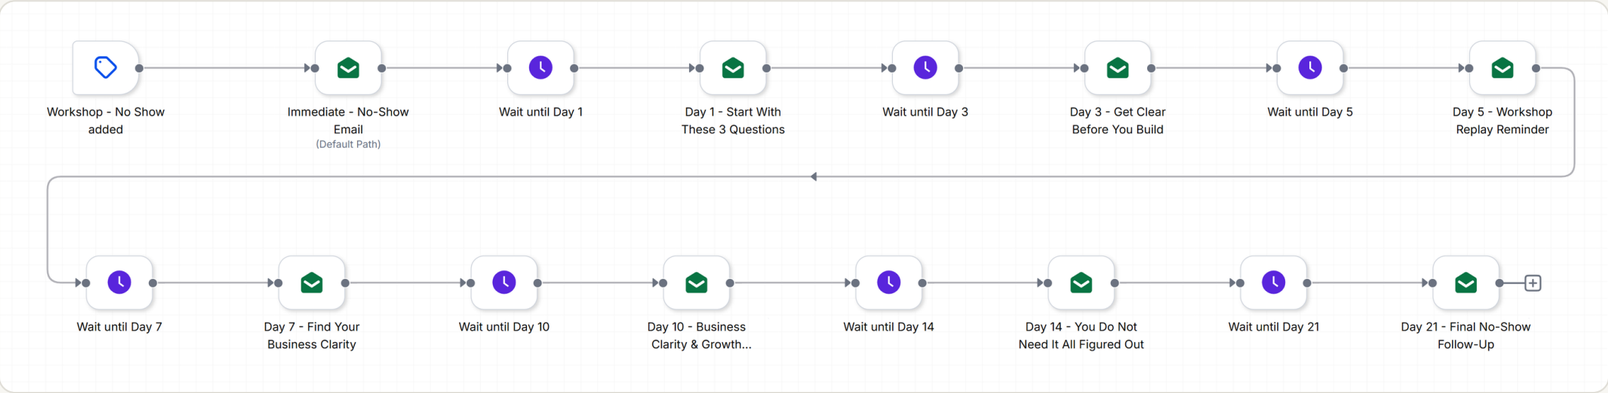

Follow-Up Sequences

ATTENDED LEAD NURTURE

Starts from the Workshop attendee enrollment tag. Eight emails over 21 days, from a thank-you to education, a case study, a strategy session offer, objection handling and a personal note.

NO-SHOW LEAD NURTURE

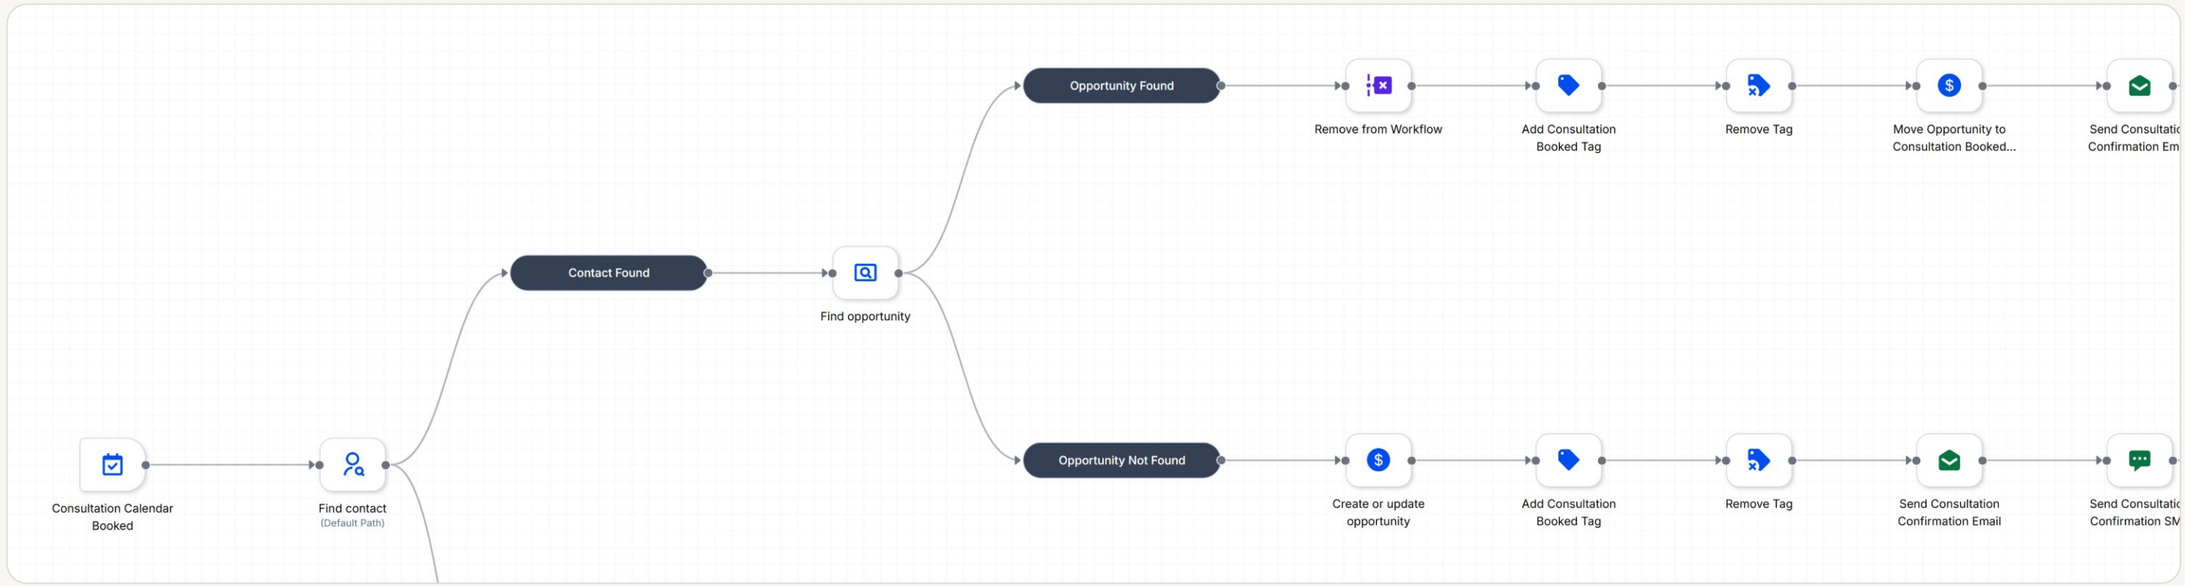

Starts when the Workshop - No Show tag is added. An immediate email, then seven more over 21 days, including a workshop replay reminder and a final no-show follow-up.

Attendees and no-shows each get their own sequence. Both are email-only in the screenshots.

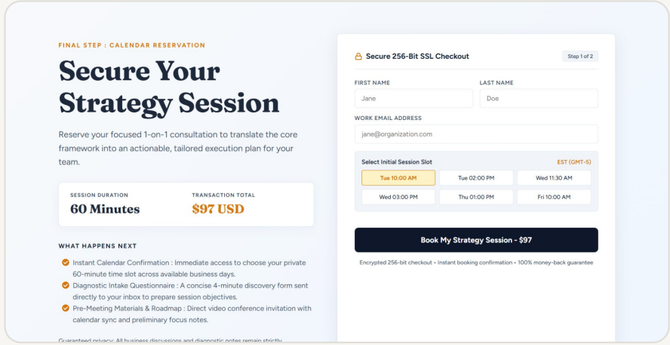

09 · GOHIGHLEVEL

Consultation Booking Automation

CONSULTATION CALENDAR BOOKED (LEFT PORTION OF THE WORKFLOW)

1-ON-1 STRATEGY SESSION LANDING PAGE

The workflow starts when a consultation calendar is booked, finds the contact and opportunity, and then follows one of three paths. On the Opportunity Found path it removes the contact from a workflow, adds a Consultation Booked tag, moves the opportunity to a Consultation Booked stage, sends a confirmation email and SMS, and creates a follow-up task for the team. A Rescheduled condition follows, with a Rescheduled tag and extra emails. There are matching Opportunity Not Found and Contact Not Found paths.

This shows the configuration only. I am not claiming any completed bookings.

10 · QUALITY CHECKS

Testing & Troubleshooting

REVIEWED IN SCREENSHOTS

- Registration steps, in order
- Reminder wait steps and channels
- Attendance tag condition and both branches
- Pipeline stages and sample opportunities
- Make.com module order

RUN EVIDENCE

- Make.com run view with green checks on the first route
- Sample opportunities placed across three pipeline stages

STILL TO VERIFY

- Whether reminders stop for attended, no-show or booked contacts
- Which step applies the attendance tags
- Router filter conditions in Make.com
- End-to-end timing across all workflows

TROUBLESHOOTING EXAMPLE · ROW NUMBER MAPPING

The problem

The rowNumber field in Google Sheets > Update a Row received no value from the preceding search module, so the module did not know which row to change.

The correction

Map the row number returned by the Search Rows module into the Update a Row module.

Expected behavior

The matching attendance row is the one that gets updated.

From my project notes. The mapping screen is not part of the screenshots.

SUMMARY

What This Sample Project Shows

I configured a connected workshop process in GoHighLevel and used Make.com and Google Sheets to support attendance records. Everything shown here comes from my sample project.

01 GoHighLevel workflow configuration

02 CRM pipeline organization

03 Contact tagging and workshop status tracking

04 Reminder and follow-up logic

05 Make.com scenario configuration

06 Google Sheets row lookup and updates

07 Troubleshooting and testing
