GoHighLevel CRM & Meta Lead Automation

Organizing Meta leads into a structured GoHighLevel sales process.

Meta Lead — CRM — Pipeline — Follow-Up

GOHIGHLEVEL WORKFLOW BUILDER

CLIENT	INDUSTRY	ROLE
MedSkin Distribution	Medical Aesthetics / Laser Equipment	GoHighLevel CRM & Automation Specialist

01 · CONTEXT

The Challenge

MedSkin Distribution needed a more organized way to bring leads from Meta / Facebook Lead Forms into GoHighLevel and manage them through the sales pipeline.

The goal was a process that was more organized and more automated.

THE GOAL WAS TO

01 Reduce manual lead handling

02 Organize incoming product inquiries

03 Structure contacts and opportunities

04 Create a reliable follow-up process

05 Give the team better visibility of incoming leads

02 · WHAT I WORKED ON

The Solution

01

Meta → GoHighLevel Integration

- Connected and troubleshot the Meta / Facebook integration with GoHighLevel
- Worked with lead forms for different product inquiries
- Configured submitted forms to trigger the appropriate GoHighLevel workflow

02

CRM & Lead Management

- Organized contacts and opportunities inside GoHighLevel
- Worked with custom fields, tags, forms, and product inquiry information
- Structured opportunities within the appropriate sales pipeline
- Configured lead assignment and internal notifications where needed

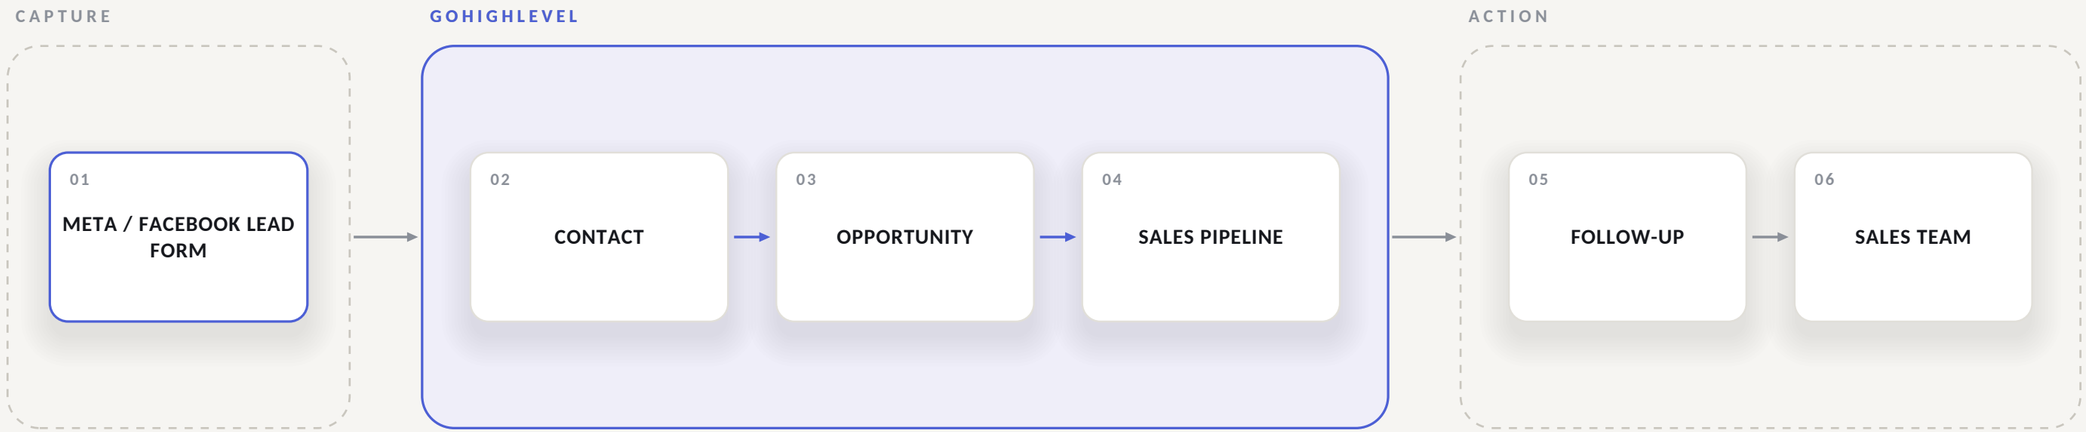

03

Workflow Automation

- Built and tested workflows triggered by Facebook Lead Form submissions
- Used workflow logic to manage contacts and opportunities
- Created follow-up actions using email / SMS and internal notifications
- Supported pipeline movement based on lead activity and sales progress

03 · LEAD FLOW

From Lead Capture to Sales Follow-Up

The goal was to create a more structured path for incoming Meta leads so they could move from lead capture into CRM management and sales follow-up without relying as heavily on manual handling.

04 · AUTOMATION

Workflow Logic

A simplified visualization of the workflow logic. The actual workflow builds are shown on the pages that follow.

01 Facebook Lead Form Submitted

08 Sales Follow-Up

Visible in the workflow screenshots

Shown for context, not visible in the screenshots

HOW THE LIVE WORKFLOWS BRANCH

Contact found *or* **Contact not found**

Opportunity found *or* **Opportunity not found**

Each submission is checked against existing contacts and opportunities first, then routed to the matching path: create what is missing, or update and tag what already exists, with internal notifications and user assignment along the way.

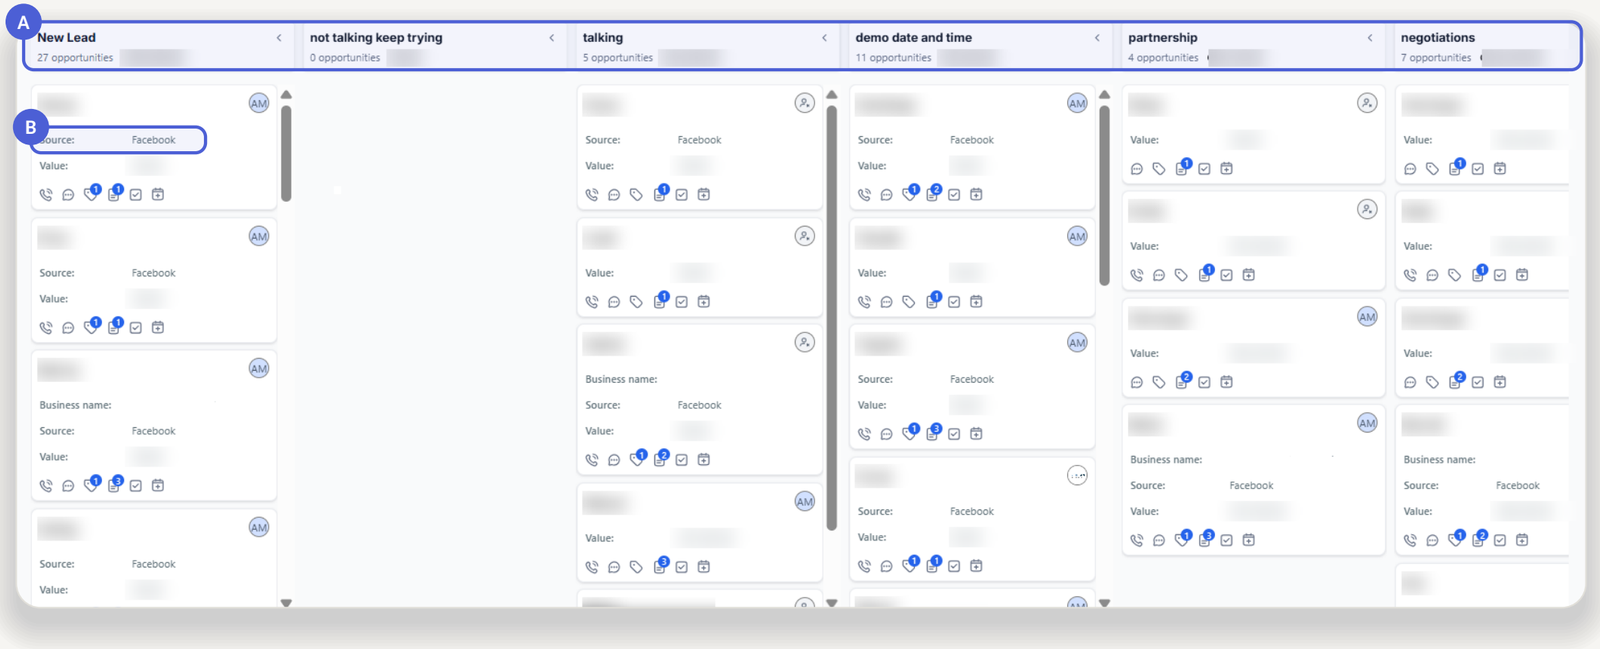

05 · CRM

CRM & Opportunity Management

I used GoHighLevel's opportunity pipeline to keep incoming Meta leads organized by sales stage.

Each opportunity carries its lead source, a value field, and shortcut icons for contact activity, so the team can see where every lead stands.

SALES PIPELINE

A Pipeline stages
Opportunities organized from New Lead through to negotiations.

B Lead source tracking
Each opportunity shows Facebook as its source.

Contact names and deal values are blurred for client privacy.

STAGES VISIBLE

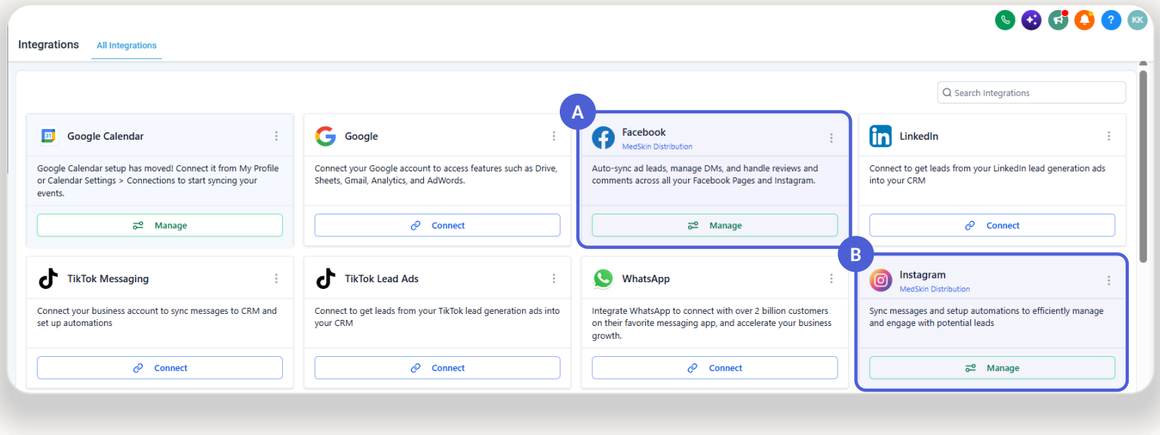

New Lead · not talking keep trying · talking · demo date and time · partnership · negotiations

06 · LEAD SOURCE

Meta Lead Integration

Connected and troubleshot the Meta / Facebook lead flow into GoHighLevel, allowing submitted lead forms to enter the CRM and trigger the appropriate lead-management workflow.

GOHIGHLEVEL INTEGRATIONS

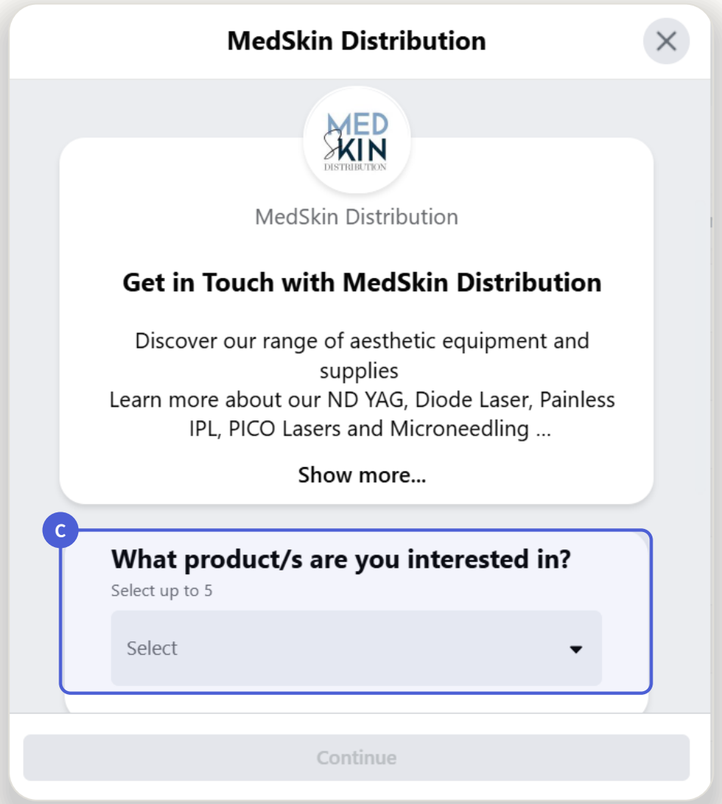

A **Facebook**
MedSkin Distribution page

B **Instagram**
MedSkin Distribution account

Lead form submissions then trigger the matching workflow, filtered by page and form (see page 8).

META LEAD FORM

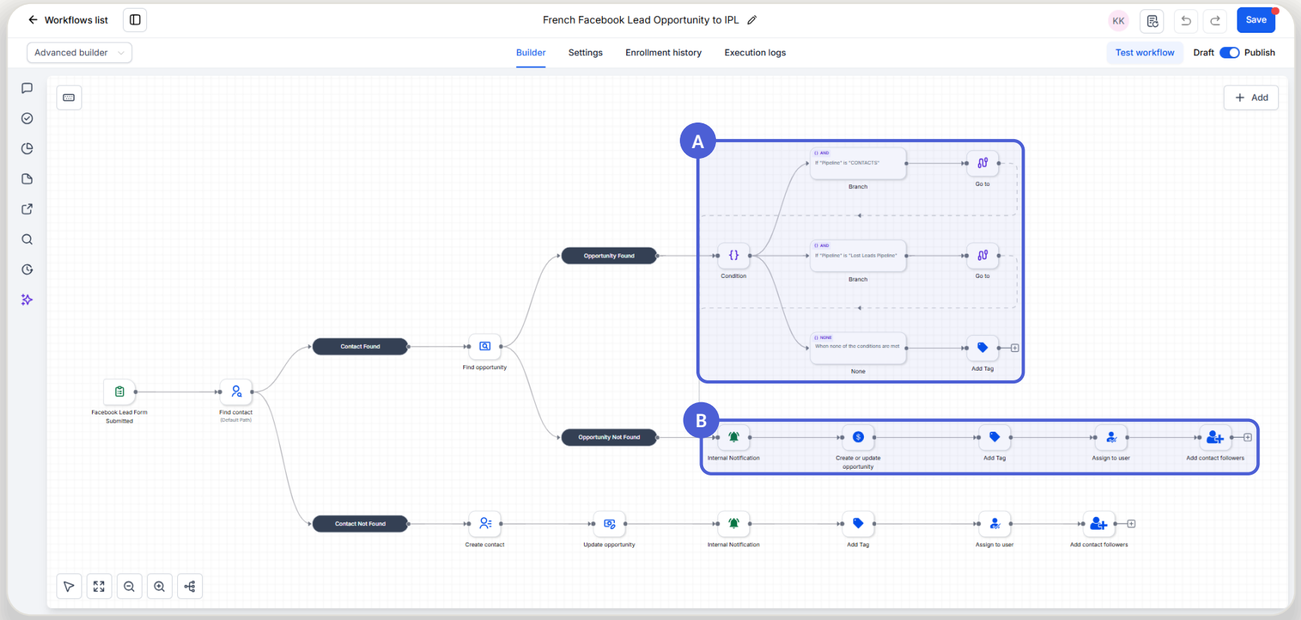

C **Product inquiry question**
Multi-select field where leads choose the products they are interested in (up to five).

07 · AUTOMATION

Automation in Action

Contact & Opportunity Logic

Branching on whether the contact and opportunity already exist, with notification, tagging, assignment and followers.

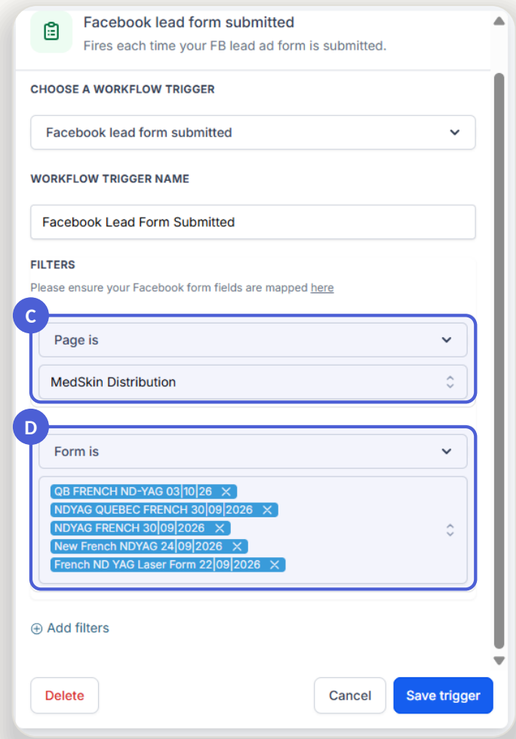

ONE WORKFLOW PER PRODUCT LINE

DIODE workflow **IPL workflow** **ND YAG workflow** *French Facebook Lead Opportunity to DIODE / IPL / ND YAG*

Lead Form Trigger

Fires when a Facebook lead form is submitted, filtered by page and form.

A — Pipeline check
Branches on the pipeline of an existing opportunity.

B — Opportunity path
Notify, create or update, tag, assign, add followers.

C — Page filter
Limited to the MedSkin Distribution page.

D — Form filter
Several lead forms feed the same workflow.

08 · OUTCOME

The Result

The setup provided MedSkin Distribution with a more structured process for managing incoming Meta leads inside GoHighLevel.

01

More Organized Lead Management

Contacts and opportunities were structured within GoHighLevel.

02

Better Pipeline Visibility

Incoming leads could be tracked through the appropriate sales pipeline.

03

Less Manual Handling

The lead flow and follow-up process became more structured through workflow automation.

SUMMARY

A More Organized Lead-to-Sales Process

This project focused on connecting Meta lead capture with GoHighLevel CRM, organizing contacts and opportunities, and creating practical automation for follow-up and pipeline management.
